Back-end: NodeJS (Familiar), Express (Familiar)
Database: MongoDB (Comfortable)
Technologies &Tools: Firebase Authentication, JWT, Git, GitHub, VScode editor, Figma, , JIRA, Chrome DevTools, Netlify, Vercel, React Router Dom (v6)

PROJECTS

EVENTMART

[Live website](#) | [Code](#)

A team project on Events Management.

Key features:

- All the events are category-based, from the category user may book an event where a google map is showing to confirm the event location.
- Dashboard panel has been included, where based on a user role certain routes and options are displayed. Where the admin can update the event status, also delete a user.
- I worked on both the front end and back end of this project. I completed the whole authentication system, category, about and implement Google translate sections.

Technologies: NextJS, NodeJS, Mongoose, Firebase Authentication, JWT, Stripe, Google translate, React leaflet, TailwindCSS, imgbb, SwiperJS, React-hot-toast, TanStack Query.

AutoTrader

[Live website](#) | [Client-side](#) | [Server-side](#)

A website to buy and sell used cars.

Key features:

- Payment Gateway has been implemented for users to securely pay for their products. Strip.js has been used to add this functionality.
- Dashboard panel has been included, where based on a user role certain routes and options are displayed.
- Uploading pictures directly from local storage functionality has been included using third-party image hosting services like imgBB.

Technologies: ReactJS, React-router-dom, NodeJS, ExpressJS, MongoDB, Firebase Authentication, JWT, Stripe, TailwindCSS, imgbb, SwiperJS, React-hot-toast, TanStack Query.

Doctors Home

[Live website](#) | [Client-side](#) | [Server-side](#)

A website for a dentist to provide various services.

Key features:

- Functionality for users to add, delete and modify reviews has been implemented using MongoDB CRUD operation.
- Admin and Private Routes are added in the front end to prevent unauthorized user access.
- API Routes are secured using JSON web tokens (JWT) to prevent unauthorized users from accessing the API routes.

Technologies: ReactJS, React-router-dom, NodeJS, ExpressJS, MongoDB, JWT, Stripe, TailwindCSS, Firebase Authentication, imgbb, TanStack Query, react-datepicker, Daisy UI, React-toastify.
